Subject: OMB Peer Review Bulletin and EPA Science Inventory

Region 8 confirms that the information in the EPA Science Inventory is current and accurate for the following two projects in which external peer review was scheduled and/or conducted in FY 2012. Both of these records within the Science Inventory are being managed by EPA's Office and Research and Development (ORD).

(1) Investigation of Ground Water Contamination near Pavillion, WY. This project has been identified as "influential scientific information" and the Science Inventory record is being managed by ORD's National Risk Management Research Laboratory's Ground Water and Ecosystems Restoration Division.

(2) IRIS Toxicological Review of Libby Amphibole Asbestos. This activity has been identified as a "highly influential scientific assessment" and the Science Inventory record is being managed by ORD's National Center for Environmental Assessment's Immediate Office.

Region 8 does not have any other influential scientific information that has been undergone or was scheduled for peer review during FY 2012.

Respectfully,

Patti
